DeepCut,

You've done good work so far, however I do have a suggestion.

I noticed that your voltage changes from one test to the next. I thought you had a power supply that is regulated? Even though I don't doubt your results so far, and the conclusions are what I expected all along, it would be good to carry out these type of tests with a fixed voltage. Just a suggestion for next time.

ROMEROUK,

Hey Romero, I noticed you logged in, hopefully you see this posting and read it. Man, have mercy on all these people that are trying to replicate your dynamo that was faked. Tell them that you faked it and how, acknowledge the "wire-X" so people can stop wasting time and money. Only you can convince some people as they worship you and are blind to anybody else saying its fake.

Hi MH,

have you ever touched in your entire life any circuit, do you have a clue how the solder is smelling,... do you... ? any even small device built somewhere? maybe joule thief,...? Any positive post in these forums in your entire life? ONLY BIG MOUTH!

All you show is a collection of copy/paste from different websites. People should check you out

sentences and compare with the web 😊

Even a doctor in science will not talk like you, will not reject one people opinions, but you... you are the best.

Me, KoneHead, ZFF and many others are doing what they do because it comes from the heart, we have faith (not your case), and if we fail is not a problem, we start again, unlimited times.

The fact that my english is not as good as your does not make you more clever, I can use your copy/paste technique and show what bright I am, but that is not important. In my case, simple is much better than your complicated/elevated words. Most of the people here have no idea of what you are talking.

What is your problem If I answer people questions, are you scared that one day you will have to eat your words? I promise you, that day is not far.

This time my Magical/fake/... will have no x wires and I will have people you know, here, with me, to witness and make you eat your words.

...oh, may I fail, no problem I will start again, same ZFF, KoneHead and all people you disgrace.

EM,

do you think that my words, any of them, will make these people stop their research? Nothing can stop it now, and not because of me, I only small in the big crowd.

I am not inviting anyone to build anything but you know, is like a dog.

If nothing was achieved since my version of the Muller device, at least people started to see and understand things they never experienced before, that alone is a good thing.

Best regards and success,
Romero

Hi Romero 😊

OK, i ran a series of voltage tests, going from 6 VDC up to 14 VDC, i will take it to 18 VD tomorrow.

Group: Moderator

Posts: 249

At each stage i recorded unshorted data vs shorted data.

Change comes from within ...

I noticed some things that puzzle me :

1. The AUL effect itself ! (This explanation may answer the rest of the questions).
2. Sometimes the rotor speeds up while the current draw remains the same.
3. Sometimes the rotor speeds up while the current draw decreases.
4. Often, after unshorting the coil, it slows down to a steady-state at a higher frequency than it's starting state.

Cheers,

DC.

Experience is a hard teacher, it gives the test first and the lesson afterward.

@Romourouk

Sorry but you fail to see the big picture. You fail to see the difference between people being "tricked" into thinking what you did was genuine, and this is why they embarked on their own builds. If you were honest guy and came to the forum and said, "Guys I have this wheel but it is not OU and I need some help", that is the way to do things honestly. But the way you did it, first video, then we find X Wire, then you did second video to amplify the tricks, then we find X Wire again, then you do the suspending video and challenge me to find how, then we find how but by then the damage has already been done.

The only reason I am asking you to come clean is to release guys from the exact replication and push them into other avenues of research. Right now, guys want to know how come yours WORKED and theirs does NOT.

So you can see what you want to see but we here were here before you came along and will eb here way after you should decide to leave and we are here to pick up the broken pieces.

You are very lucky guy that I discovered the X Wires before I did my own replication or even some others started that have much less tolerance for tricks. This you do not realize how my interjection may have saved you so much more headache because some just decided to not replicate. That is a good thing.

So please do not talk to us about virtuousness and that your act got people involved in something they would otherwise not have gotten involved in. THEY WERE TRICKED. That is the grand reality here.

So we have a professor asking why is it that no one has successfully replicated working Romero wheel. Well since the Romero wheel never worked, all the replications are as successful. How to expect anything more.

Romero,

Even though it has been a long time since I worked on a bench as an enthusiast building analog computers to do laser light shows or as a professional working with a scope and a logic analyzer in high tech, I can assure you that I know what the smell of solder is like and I could spin circles around you on the bench with my eyes closed. I also know what the thermal profiling for a surface mount solder reflow oven is like as well as what a wave solder machine is like.

I have analyzed the Joule Thief inside-out and the truth is the vast majority of people on the OU Joule Thief thread are just having fun and they actually don't understand how it works. I don't make the truth I am just reporting the truth to you since you raised the issue. Nine out of ten people on the Joule Thief thread cannot explain to you how a Joule Thief can light up a string of 50 LEDs in series. Can you?

What do you mean it comes from the heart? If you had a heart you would not watch your friends and others waste their time and money on your garbage. What if they have young children? Wouldn't they be better off spending their money and their time on their children?

Simple is not always better. Whether you like it or not, electronics and physics and motors can be be complicated and the issues raised sometimes imply precise questions that require precise answers.

You are the one that is disgracing your friends and peers because you cheated just like I predicted and just like Wattsup discovered.

You should come clean and admit the truth and stop all of this nonsense. You consciously committed an irrational act, perhaps it was an impulse out of frustration. That doesn't exonerate you.

I have seen you answer people's questions and I think that sometimes you are just making up the answers or giving very general answers that have no real substance. Saying something like, "You have to find the right spacing and do more experimentation" is not really an answer. That just makes the person go back to their replication and waste more time when there is no solution.

I am presuming that you are talking about your new pulse motor that is larger and uses thicker components and larger magnets.

It's not going to be over unity, it's just going to be another pulse motor with generator coils.

Thank you for your reply MileHigh,

I would love to see any of your builds.

For me, people who are negative are actually pushing me forward. I have no personal problem with you, whatever words you use, but many people here are upset with your attitude, not against me, but against everyone. If you could be less critic maybe people will appreciate your suggestions.

MH - "Saying something like, "You have to find the right spacing and do more experimentation" is not really an answer. That just makes the person go back to their replication and waste more time when there is no solution."

How can I answer something in a different way when I don't have a proper answer, I am experimenting everyday and learn more and more.

You are right, I am frustrated, that device had a x wire, and is not possible to get even close to OU with it, I keep trying, there are unlimited things I can try and I love it.

With this confession are people going to be more happy? Who knows?

Best regards,
Romero

STOP THE PRESSES!!!! (OR THE INTERNET PROTOCOL PACKETS) LOL

Good on you Romero for coming clean. Yes, a clear and unambiguous posting on OU would be great. I am not going to put words in your mouth but you know how rabid the believers are.

If you stated, "I wired 15 volts DC into the FWBR bus to power the DC-to-DC converter for my video clips.... etc" (or whatever you really did) that might convince the rabid believers. Taking back the story about the MIB visit would be important also.

I am not telling you what to say, I have no right to do that. I am just telling you how I am thinking about this.

RomeroUK,

MileHigh has a good point. Some people will not believe unless you tell them clearly what you did to fake it. Tell them you ran power to the output diode bridge from the battery. Tell them wattsup was right, and to look at the wire-X. Only than will these people get it.

@ All,

Hey, we need to accept RomeroUK back "into the fold". It took guys to admit the faked pit=1He \$00

a repentant child now! The prodigal son has come home! LOL 😄

OK, now that the RomeroUK saga is coming to a close, who's next? Who's going to bring us the next convincing "fake" Overunity device? MileHigh is just waiting to "shoot from the hip!" 🗨️ 😄 😎

I may be the "bad guy" in some sort of free energy Spaghetti Western, but I just try to tell the truth. I admit I have a strong sense of moral indignation when I see things that I think are wrong and people are being taken advantage of. You would not want to hear my thoughts on the Vancouver riots or the London riots.

I know I can be tough sometimes and some people are sensitive and it causes bad feelings. The good news for many is that the whole Romerouk saga was pretty much the last time I will follow one of these things. I don't really follow any threads regularly on the forums anymore. It's actually impossible to have any positive lasting influence on the debate. And by positive I mean things like getting people to accept that battery voltages are not an indicator of the state of charge of a battery. It's literally impossible to do that so I give up. I may have taken a few kicks at the can recently but I am pretty much done with this and like a cowboy I am fading away.

Hey MH, stick around man, you have to do the dirty work for us "intellectuals" just kidding. Seriously, good things pop up once in a while on these forums. Just like you, I don't follow all the postings, it's just too much garbage to sort through. Anybody who can say something says it, and just because it was said doesn't mean it's true, but you feel like it should be corrected and combated, and frankly you just can't police the whole mess, it's too big for anyone person or even organization. It's definitively a bad place to learn anything useful, but there are gems everywhere, here and there. Some folks build such nice devices, regardless if they work or not, and that's to be appreciated, I think.

Anyway, I'm almost wanting to offer a sizable reward for anybody that can produce at least 10 watts of free energy, FROM A SOURCE I CAN NOT IDENTIFY AFTER CLOSE EXAMINATION!

but I am short on cash right now, so all I can offer is \$1!

That's almost scary. It's the Manchurian Candidate syndrome.

One possible solution is simply solar power. Year by year the percentage of our electrical power supplied by solar and other renewable sources increases. In 50 years it might be 50%, who knows.

All of the doomsayers that say that Nature is colluding with us to destroy us is a

our human activity and we should all ride bicycles to work need to take a big fat chill pill.

Even without free energy renewable energy and reduced per capita energy consumption and other measures should ensure we will still be here in 50, 100, and 500 years.

The glass is more than half full no matter what doomsday message you hear this week in the news.

@Romourouk

I love wheels, motors, gears, magnets, coils, circuits and more. I have the utmost respect for anyone doing anything with these that is destined for OU research.

They are not the problem.

In any case, if you come clean, it will only be good for you so that you can release yourself also from this cloud you are held under and the same cloud we, as zealous overunity OUsers will never let go because it is the base of our own legitimacy of what we are trying to achieve every damn day of the year. You see, we spend our days and nights experimenting and reporting and bringing forth the REAL results of our exercises to help each other advance and hopefully to maybe create a spark in the brain of someone yet unknown to push it to the next level that we fail to see clearly. But then you come along and muddy the waters.

fake videos, fake stories and you take away the attention given to other tasks to follow your own tricky based ideals and ideas.

Do you think it was fun for me to spend all that time on your videos? Do you think it was fun to be at the forefront of such a situation. Do you think I do not have better things to do. Well yes I do but I knew the damage that was being done was greater then the time I had to spend to try and clear this up for others.

It has been many many months now that guys are trying to make their wheels work like yours. Do you understand that the damage done here is tremendous in that all that effort was based on false pretenses and false expectations and we already know that false anything never yields good results.

So here is a question for you.

Tell me what you think would have been the situation today if you never made those videos and simply came on the forum to ask for honest help showing us your build in an honest manner with all its limitations and yes, all its potentials. So tell me if from day one you received our help, but now this help was specifically pertinent to the hindrances of your wheel and not spending endless days and nights and months trying to simply replicate your errors. So where would you be today? After all, the only real reason I can think of for you doing your videos is to show your device and how you wish it worked and then hoping that guys will provide you with some great insights to help you move forward. But that plan backfired and the help you thought you would get did not come because guys only concentrated on your false wheel and no one really helped you advance your wheel to a better design. So in essence, you are still in the same situation today as you were from that initial day of making your first video. No gain. Well maybe some effects but to tell you the truth, I could have helped you 10 times more not even with a wheel because I can turn your wheel in my brain and see it work and see where it is going wrong. I do not need to build it to know this. This is one of my gifts.

One day I saw this wheel turning in my head. It is the most complicated wheel I have ever tried to make turn on its own and I am still working at it. Now if you knew all the complexities of this wheel and all the simultaneous actions required, you would think I am crazy to try this but I am still trying it and plan a new build in 2012 to take it to the next level because I know where I went wrong and cannot fix it with the wheel the way it is now. I could have faked the wheel turning on its own and make a video and convince everyone that I am such a great brain. But what does that give me. Nothing but crap on a stick because I will never be able to show it in real life and will have to invent so many stories to cover my back. It is not worth it. We have stuck to being honest in our works because that is the easiest thing we can actually do in this complicated and hectic field of OU research.

<http://purco.qc.ca/ftp/Wattsups%27%20stuff/eight-ball-wheel/>

By the way, I saw your last video of the small wheel and noticed you were using one of the original Romero Wheel drive circuits. So, I know you still have your Romero wheel and I know that it must be very hard for you to not take it out and show effects and experiments with that wheel because it is supposed to be missing in action while fighting against the forces of evil. I think it is time to come clean, you need it just as much as others need to know it for themselves. This will clear the air and provide a base for common healing and moving forward in a more collaborative manner then all this fighting and struggling going on day after day.

You have to understand one main point here and that is the one of common respect between OU researchers. You have shown that you are an OU researcher and that one fact is your pass card to earn back the respect you deserve as we all deserve everyday. You are actually a lucky guy and i would really recommend you take advantage of this free pass.

Don't worry about backlash. It has always been a world of replicator beware. When Mr. Mylow was on the forum I spent a good \$1000 on my wheel and as the moderator of that main thread, I ate so much crow meat I should have gained 100 pounds. Some dude on the

take the good with the bad and move forward. That is the case for any other replicator.

EM

In my opinion Bill's Muller daughter had no reason to continue if she knew that the device has no future. The last device they built is a very complex one and very expensive to be only a simple generator.

In the end, I believe that the ultimate FE device will have to be a SS device to be long lasting and reliable.
