

Don Smith Devices - topic on EF.com torrent 1.txt

Hello to all folks here !!

I am happy to announce the availability of my first collection of "printed" pdf pages of the energeticforum thread/topic: Don Smith devices too good to be true.

This collection has also some additional info on the folder : Related Stuff.
This comes in a torrent filesize about 259MB.

Here is the readme-thing.txt file:

Greetings folks!

This is my first [1] compilation of info I've been collecting for years till now.
I hope this stuff to be useful to every sincere researcher.

This is how I can contribute a bit to loads of works done by good free energy researchers
guys & gals.

Many special things to some good-hearted energeticforum members,
team-energy.teamtalkforum

and to so many anonymous contributors around the globe like some folks from Russia
etc.

Most precisely this collection is from energetic thread/topic called:

Don Smith Devices too Good to Be True....

Here are almost all posts with only less than 10 posts missing.

Pages "printed" here are from virtually start of topic to page 170

And there is a folder added with stuff related to Don Smith work and so on.
Enjoy Smile

Have a nice learning curve with this imbarkation of useful info Wink

Ahh btw - lately the topic on energeticforum got enough off-topic - so please
feel free to NOT read that time-wasting b...s.

Sorry for the inconvenience, but my time is limited as most free energy enthusiasts
Wink

Again, if you have the "nerves" it takes to edit and clean up this stuff, than by
all means
please do it.

Thanks and Cheers to a Free Bright Energy Future !!

Best Regards from one of your fellow researchers.

Peculian.

In case you might wonder how I "printed" those pdf files, here is the answer:
I use an installed program, virtual -pdf printer- like doPdf or primo-pdf and so
on..
to a selected folder. Wink hope this helps you do the same.

here you can download the torrent file:
